I am in a 9am meeting now. How is in about 30 minutes. 1015 my time (815-ish your time)

Subject: RE: Improved Timing and Cyber Initiative

Sure – by the way, I am in early today – you could call now if you like.... Otherwise 11:30 MST is fine...

Subject: Re: Improved Timing and Cyber Initiative
Works for me. Can I call you? I am not exactly sure where I might be at 1:30.

From: "Oates, Chris" <chris.oates@nist.gov>

To: Matt Scholl <matthew.scholl@nist.gov>
Subject: RE: Improved Timing and Cyber Initiative
How about 1:30 for you, 11:30 for me?

From: Scholl, Matthew

To: Oates, Chris <chris.oates@nist.gov>
Subject: Re: Improved Timing and Cyber Initiative
Chris, I have an 1130 tomorrow (my time) that goes to 1230 but open all day other than that.
Do you have another window tomorrow that could work for you?

Matt,

Seeing as you are away next week, would a first chat tomorrow morning make sense? How about 11:15 your time (9:15 MST)?
Chris

Chris,

Sounds like a plan and thanks for circling back on this. I am interested and want to wrap in Kevin Stine (Or one of his guys) who works closely with CTL also.

Let me know when you would like to do a call. I am in SF at a conference all next week but other than that have time.

Matt

Hi Matt,

Greetings from Boulder! I am curious as to where things stand right now on a possible joint effort on an initiative. I am currently preparing a "Next Generation Timing Solutions for US Economic and Security Interests" Initiative draft, which might accommodate nicely some of the ideas you and Carl were considering. Perhaps a conversation would be a good place for us to start if you are interested. We just need to compile some basic ideas at this point – we can flesh things out later. Feel free to give me a call at your convenience.

Thanks,

Chris

Dr. Chris Oates

Matt

Thursday is out since many of us are tied up in training. Including the networking people is quite reasonable.

Carl

Carl,

Sounds like a plan. While we scope this in, I think I would like to include the folks working wireless (3GPP/LTE Security) and the Network Division at the start if that's OK.

Lets shoot for Thursday next week and I will ask folks about their availability. We can go for a quorum and fill folks in as they become available.

Let me know where you want to huddle for a VTC, I can also see if I can get 225 B111 which has VTC to boulder as well.

Matt

Subject: Improved Timing and Cyber

Dear Matt,

As I mentioned to you earlier today we are working on a set of 2-pagers that we can be used both to inform the FY18 process and can be shared with the transition team come November or December of this year.

One of these areas would be something like "Quantum-based cyber security" or "Improved Security in an Increasingly Complex World."

The latter probably being a little better title but the idea being PML works to improve timing dissemination both in fiber and things like cell towers or valuable internet nodes — basically small high stable and accurate clocks — because we are aware that improved timing allows everything from improved "computer forensics/fingerprinting", to improved encryption, reduced man-in-the-middle attacks, improved financial stamping, ... PML and predominantly Time and Frequency Division (Chris Oates) would love to team up with the Computer Security Division (CSD) because much of the application space is yours. I think together we could create a very powerful 2-pager.

If you have a few people in CSD who would like to spend a hour discussing the nature of such a two pager with Chris and a few of us from PML we think this would be great. Wy not talk with Chuck and your staff and let us know if this is something of interest. If so the two sides can come up with a small group of people and we can have a video conference to discuss what would be the best hooks to use to make this compelling and the nature of the major piece of such an initiative so we can get a draft going.

PML is hoping to have drafts of 2-pager by the end of this month although they will clearly undergo changes beyond that. Thus if interested it would be great to have the video conference perhaps next week. If Friday morning next week works I will be in Boulder but other times work as well.

Carl
