Do we need to indicate to them that even the current submission is complete and proper, you can modify and re-submit before 11/30 or we just do not say anything unless they ask? We certainly can worry this when we send the acknowledgement.

If they re-submit, then that is their choice. I would think we disregard the old one, and only consider the re-submission. I would think we would be able to recognize if this happens, but I don't think this will be a common occurrence.

Good catch on Sara's name change.

Hi, Dustin,

I did not remember whether in SHA-3 this is a situation: a submission is checked before 9/30 as complete and proper and is submitted again with some modifications before 11/30. Does a submitter need to tell whether this is a re-submission?

By the way, Sara's name change to Sara Kerman after SHA-3.

Just in case you are interested….

I modified similar documents Shu-Jen used for SHA-3. We will follow these to check submissions for

being "complete and proper". Yi-Kai, if you can, it might be nice to check that I didn't miss anything in my checklist.

Sara,
    See my modified versions. I'm not going to be locking everything up in a safe!

Hey Dustin,
Here are a couple of things Shu-jen put together for SHA-3. Not sure if you've already thought about something along these lines or if these could be helpful in sorting submissions.
