---

Thanks, Lily. I think the audience is fairly technical and some people like Paul Kocher have the background for a deep dive while others like Bob Blakely understand the issues. Does that help? I would be happy to discuss this with the three of you if you like.

Regards,

Donna

This is the same forum where Kerry presented crypto agility in May 2016. It looks like Feb. 6 is for software update. Our talk will be in Feb. 7. Dustin and I have given many talks on this topic. The problem is to get the materials fit into the audience.

Lily

Lily and Andy,

I have been working with a NAS Forum on Cyber-Resilience Forum, chaired by Fred Schneider <http://sites.nationalacademies.org/deps/cyber/index.htm>. (I think you have spoken with them last year.) They have invite us to present on our quantum resistance crypto program. Would you or someone from the team be interested in presenting for NIST at the Feb 6-7 meeting in DC? It is a great group to engage and there is often thoughtful discussion.

Thanks,

Donna
