---

I can contact ITAC, but if we accept the attachment, it should be scanned equally well. I don't think that's an issue. The other question about zero-day or unknown malware... there's now much we can do about that.

Larry,

Any guidance you can give us?

Dustin, do you or anyone else know about what differences there are in malware scanning depending on the type of file archive (e.g. zip, rar, tar). Also, does anybody think that there might be potential of being victims of a zero-day attack? We seem to have just received a scam email which makes me wonder about the attention we may receive since we are soliciting electronic submissions.

Thanks.

Cheers,  
Daniel
