Jacob,

I have access to the subscribers on the forum.

Subject: Regarding Automotive System On a Chip and Other Long-Lifespan Hardware Companies (e.g. followup from NVIDIA conference call)

Yesterday it sounded like Lily and everyone else agreed that we should try to make an effort to expand our presence at conferences/etc. for the system-on-a-chip sector to ensure that they are familiar with the PQC standardization initiative and that they are aware of where we stand at present/don't end up putting something of questionable security (to put it charitably) on their hardware.

I interned at Qualcomm in the summer of 2012 and they are one of the companies that as far as I know we haven't been in sufficient contact with. I was considering cold-emailing Alex Dent (some of you may have met him in the past? John?).

It also occurs to me that we presumably have a list of email addresses of subscribers to the pqc-forum mailing list, and reading through the list of subscribers could be valuable in either trying to contact people to get an idea of what conferences we should be attending/what issues/perspectives they may have but haven't gone to the trouble of sharing with us yet.

(How can we access the subscriber list? Dustin do you know?)
